

QEVRYN Privacy Policy

Privacy-First Design | Built by Veeomdecoders

1. Privacy Absolute Guarantee:

Your files, code blocks, chats, notes, and local vector indexes stay entirely on your local Windows/Linux hardware. No background syncs exist.

2. Memory Sovereignty:

All personalized memories are saved locally. You have the complete right to inspect, modify, export, or completely wipe all memories at any time.

3. External Connections:

Online and Hybrid Cores route context packets to Gemini/AWS only after you give explicit permission. Prompt values are protected from public training.

4. Telemetry Opt-Out:

Telemetry is deactivated by default. If enabled, it only transfers anonymous hardware metrics, never raw prompt inputs or private file paths.

Verified secure,
