

# QEVRYN Responsible AI Policy

Ethical Deployment Framework | Built by Veeomdecoders

1. Purposeful Design Boundaries:

QEVRYN is crafted as a productivity accelerator. We prohibit its use for cyberattack engineering, deepfake propagation, or systemic fraud campaigns.

2. Human-In-The-Loop (HITL):

No mission-critical software deployment, medical dosage structure, or legal filing should be completely automated. A human operator must verify all outputs.

3. Structural Transparency:

Answers indicate precisely which model and routing core generated the output. Grounded references are cited dynamically to avoid hallucination confusion.

Cooperating for safety,

Veeomdecoders Compliance Council
