

QEVRYN Terms of Service

Version: 0.1-Beta | Built by Veeomdecoders

1. Local-First Design:

All user chats, notes, memories, and documents are kept exclusively on the user's local Windows or Linux desktop machine. No data is shared.

2. Consent-Based Downloads:

The system will never silently download massive model weights or indexes. Every large package requires direct, explicit user approval.

3. Cores and Safety Limits:

- Medical Information Core provides educational summaries only, not medical diagnosis.
- Legal Information Core outlines general regulatory frameworks, not representation.

4. Cloud Cost Management:

Cloud endpoints are off by default. Out-of-pocket costs are targeted to zero via strict budget guardrails and AWS ap-south-1 Mumbai credit parameters.

Signed,

The Veeomdecoders Development Team
